

Full Strength TENT SYSTEM

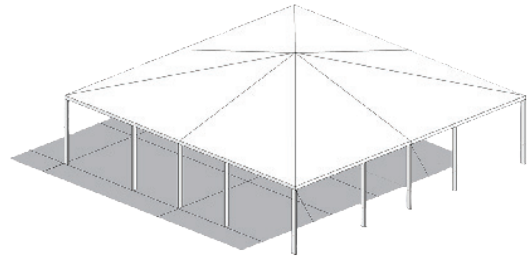

Rainier Full Strength Tents are the strongest frame tent systems on the market. Common tube lengths are used in a variety of tent sizes, configurations, and positions, simplifying parts management and minimizing your investment as your needs change or grow.

RAINIER TENT

FULL STRENGTH TENT SYSTEM

- The Full Strength frame system is ideal for high wind or semi-permanent installations.
- Tube lengths are versatile for a variety of tent sizes, configurations, and positions, simplifying parts management.
- All connectors are welded steel components assembled in state-of-the-art facilities to ensure accuracy.
- All connectors are zinc plated to protect against rust.
- Connectors in the system have additional drilling locations for cross bolting to increase frame strength.
- Brace bars connect directly to the function slot, eliminating the bolt-on brackets.
- The frame can be pinned for fast setup or bolted for long-term stability.
- Manufactured with the best aluminum alloy extrusions, then clear anodized for long-lasting protection from oxidation.

THE KEDER TENT TOP

For easy maintenance and to extend the life of the tent, our Full Strength tent frame pairs with keder frame tops. The keder top is easy to clean, resistant to mold, mildew, and UV rays, and offers a superior appearance.

THE MONOSLOPE TENT

The Monoslope Full Strength tent is a dynamic system that provides covered space in compact areas. This tent is available in 10', 15', and 20' bays and can be customized to extend as needed.

BAYTEX TENT LINERS

Baytex tent liners are precisely designed and manufactured to fit and hang perfectly. Available in a variety of styles, colors, and materials, Baytex tent liners transform any event from ordinary to spectacular.
